

**Water optimisation from BWT water+more
for the vending sector**

Success in the vending sector

Vending products are still popular today because they have developed into attractive lifestyle products. Modern vending machines are therefore replacing the traditional coffee machine in more and more offices.

When placed effectively, they act like a magnet – a gathering place where colleagues can chat and purchase high-quality vending products. There are also other reasons for the boom in the vending sector: the performance of the machines, the quality of the raw material and the vending products they are used to produce have improved immensely.

However, one raw material is often overlooked, even though it plays an extremely significant role. To ensure consistent quality of the vending products and to protect from limescale deposits in the machine, water must be optimised with a filter.

And not just any filter – the right one.

The water optimisation systems from BWT water+more are the only suitable solutions for the booming vending sector. They combine high operational security, low operating costs, high machine availability and convenient filter replacement, kept down to a bare minimum. In short: convenience and economic viability from BWT water+more for your success in the vending industry.

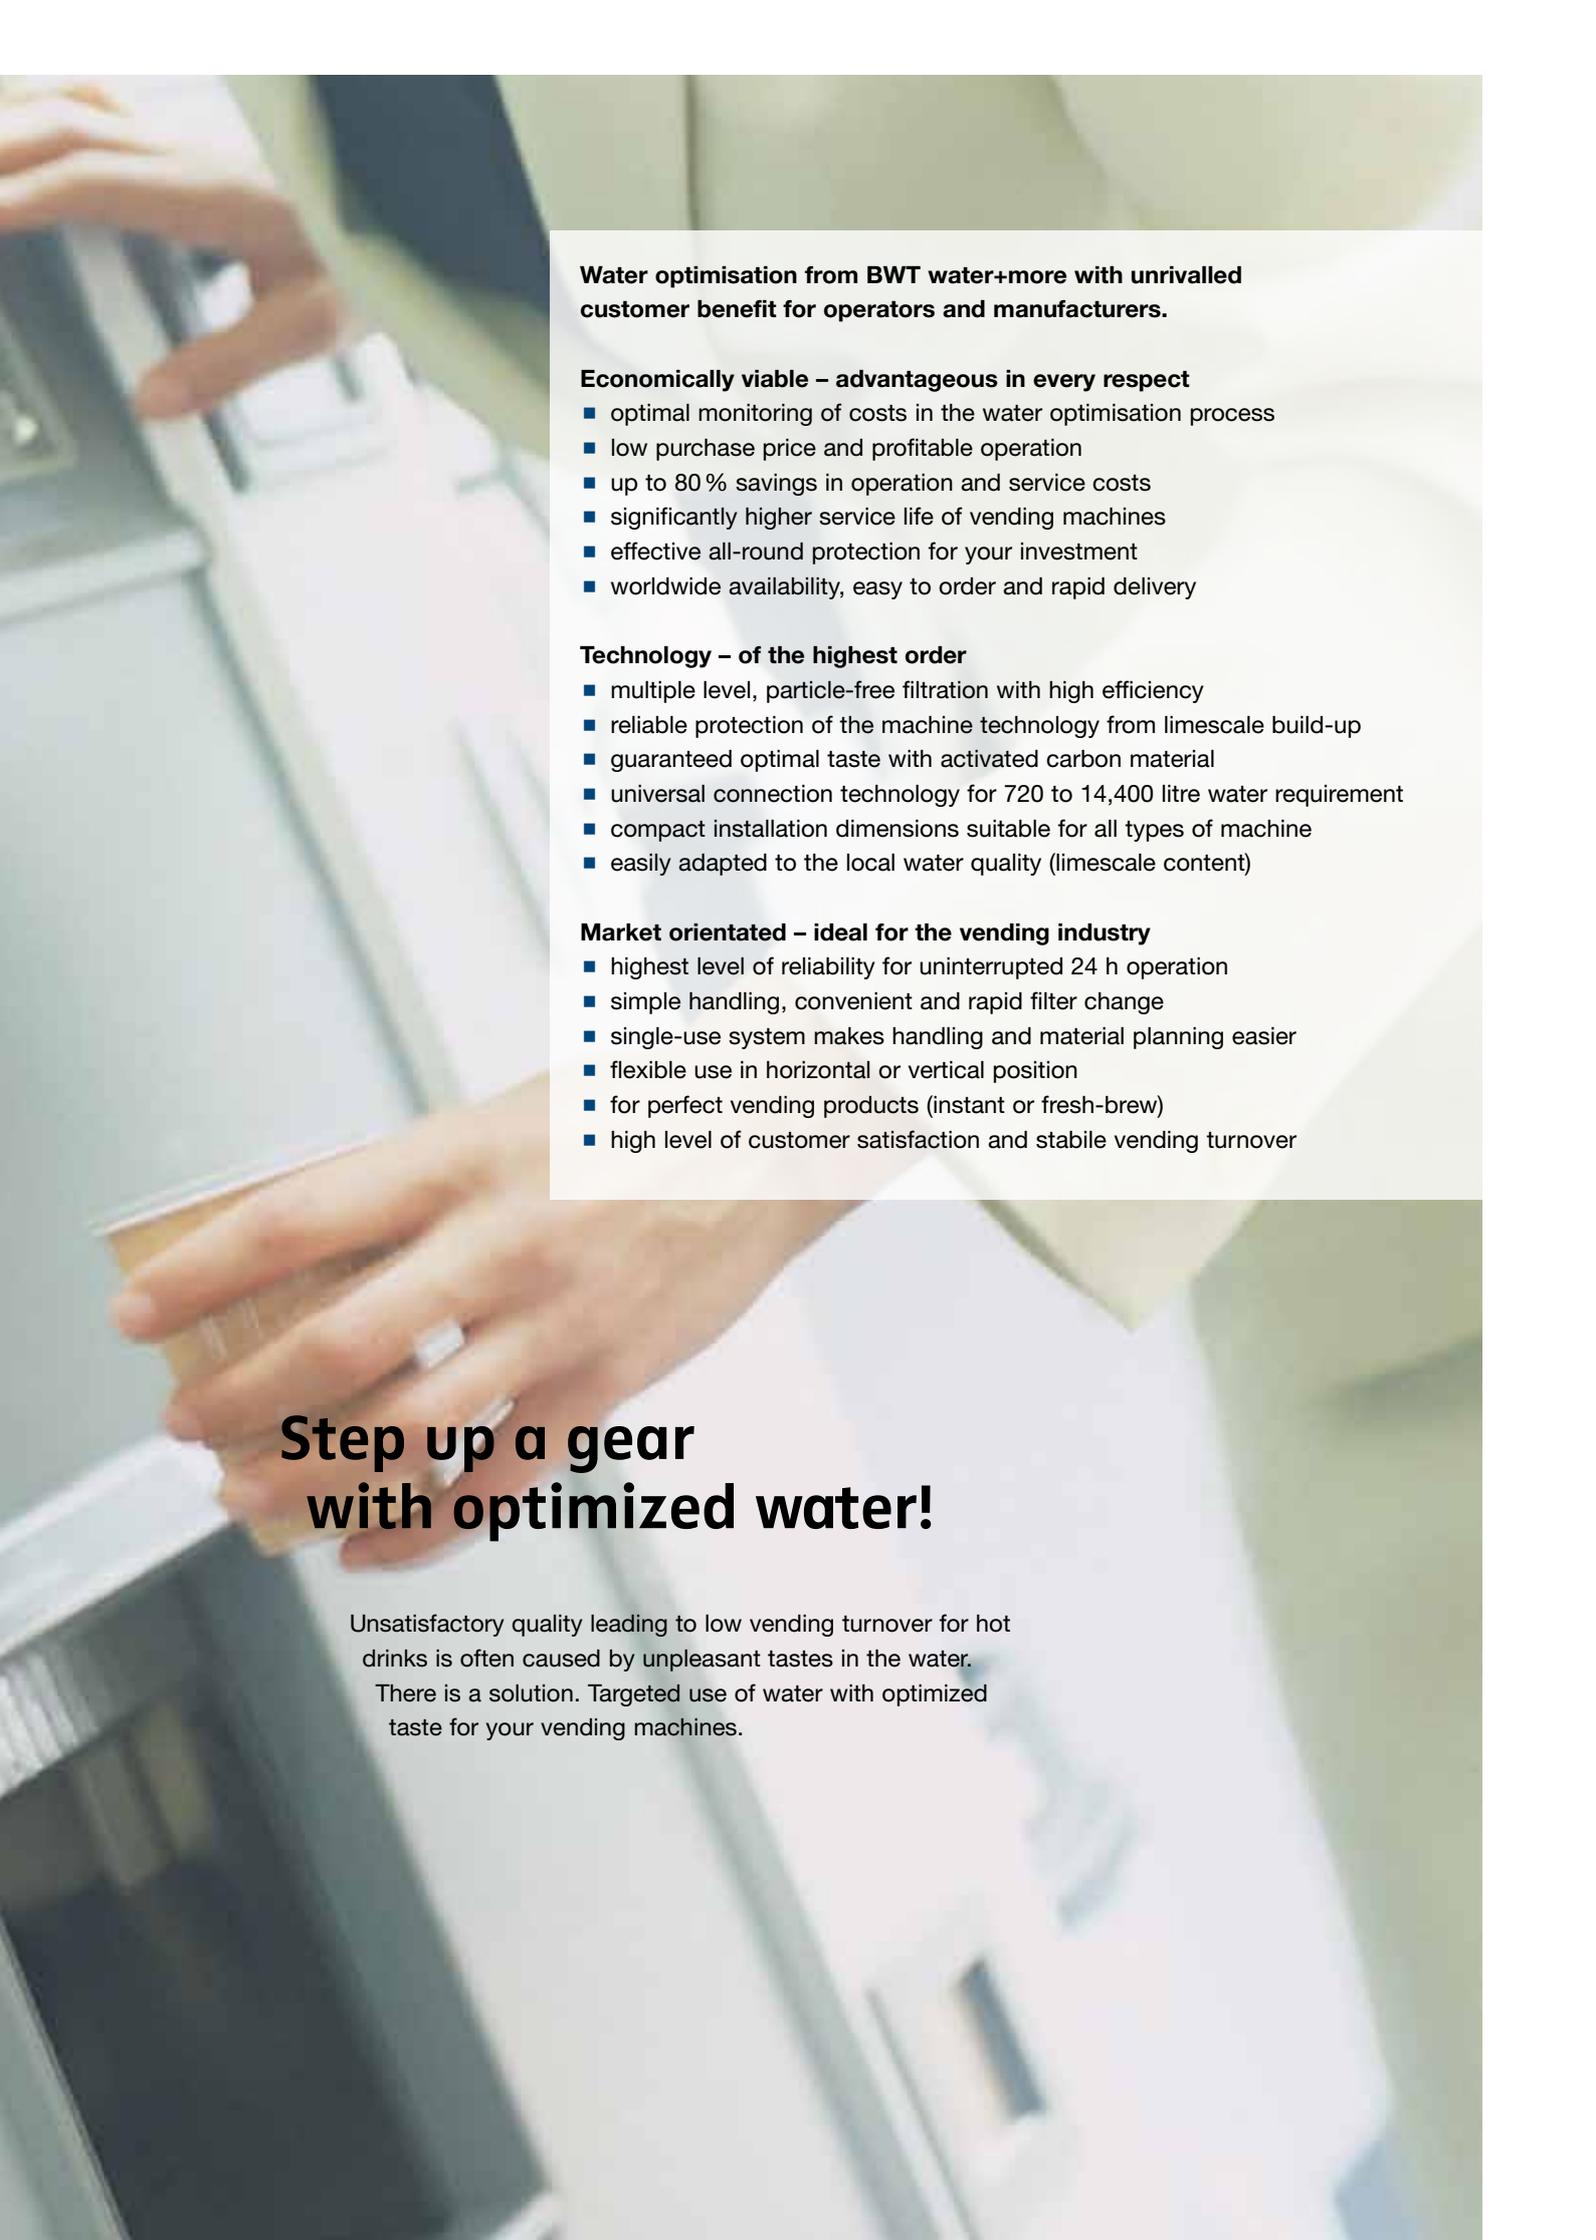

Your specialist for water: BWT water+more

Best Water Technology – BWT

The name indicates what to expect. The best water for every requirement, the latest technology, tailor-made solutions for our customers. A 100 % professional approach at all times, a local presence for our customers as well as a worldwide partner. This makes the international BWT Group a competent partner for water preparation: both today and in future.

BWT water+more

The perfect combination of technology, product benefit and customer orientation. Focusing 100 % on the requirements of the professionals in the market. Individual product and business models provide unique benefits for each customer.

A close-up photograph of a person's hand holding a brown paper coffee cup. The hand is positioned next to a white vending machine. The background is slightly blurred, showing more of the machine and the person's arm. The overall scene is brightly lit, suggesting an indoor setting like a break room or office.

Water optimisation from BWT water+more with unrivalled customer benefit for operators and manufacturers.

Economically viable – advantageous in every respect

- optimal monitoring of costs in the water optimisation process
- low purchase price and profitable operation
- up to 80 % savings in operation and service costs
- significantly higher service life of vending machines
- effective all-round protection for your investment
- worldwide availability, easy to order and rapid delivery

Technology – of the highest order

- multiple level, particle-free filtration with high efficiency
- reliable protection of the machine technology from limescale build-up
- guaranteed optimal taste with activated carbon material
- universal connection technology for 720 to 14,400 litre water requirement
- compact installation dimensions suitable for all types of machine
- easily adapted to the local water quality (limescale content)

Market orientated – ideal for the vending industry

- highest level of reliability for uninterrupted 24 h operation
- simple handling, convenient and rapid filter change
- single-use system makes handling and material planning easier
- flexible use in horizontal or vertical position
- for perfect vending products (instant or fresh-brew)
- high level of customer satisfaction and stable vending turnover

Step up a gear with optimized water!

Unsatisfactory quality leading to low vending turnover for hot drinks is often caused by unpleasant tastes in the water.

There is a solution. Targeted use of water with optimized taste for your vending machines.

Products for water optimisation

In Europe drinking water satisfies the highest quality standards. However, water with a low carbonate hardness is better for hot drinks and coffee machines. But it should also be rich in minerals without tasting of chlorine. BWT water+more fulfils the high demands of the catering industry with customised solutions for water optimisation – for individual water requirements ranging from 50 to 20,000 litres*.

Filter cartridges for mains water connection

- Extremely compact – whatever the installation situation
- Practical – horizontal and vertical installation possible
- Flexible – one connection head for all sizes of filter
- High capacity – for greater efficiency
- Activated carbon fleece – improves taste
- 5-stage filtration – for optimum particle-free water
- Capacity up to 14,400 litres*

* With a standard setting and carbonate hardness of 10 °.

Filter cartridges for use in coffee machine tanks

- Connection technology – individualised for each coffee machine
- Capacity – for top performance and efficiency
- Activated carbon fleece – for a great taste
- 4-stage filtration – for optimum particle-free water
- Capacity up to 200 litres*

BWT – the leading international water technology group

The BWT Group is present all over Europe with subsidiaries and affiliated companies. Water and environmentally-friendly technology, as well as international sustainability management with regard to customers, employees, the environment, market partners and the community, reflect the responsible approach at the heart of the company. The essential life-force water, and the increasing demands on safety, hygiene and health in everyday life pose a number of new challenges. Building on the strong European market position, BWT has worked consistently to turn the vision: Water technology for a better life!
